BUSINESS STRATEGY & SAAS PROPOSAL

Kigali Fleet & Dispatch SaaS

Streamlining Private Car Rentals, Tour Operators, and Airport Transfers in Rwanda

THE SEVERE, REAL-WORLD PROBLEM

Kigali is the hub for international conferences, NGOs, tourism, and corporate business travel in East Africa. Every day, corporate clients, expats, and tourists rent 4x4 SUVs, luxury sedans, or safari vans, or book premium airport transfers (Kigali International Airport to Bugesera, Volcanoes National Park, Akagera, etc.). However, running a private car rental agency in Kigali is an operational nightmare:

The Fleet Double-Booking Crisis

Agencies track their cars across scattered whiteboards or messy Excel sheets. A manager will manually book a specific Toyota Land Cruiser for a tourist heading to Musanze on Saturday, while another coordinator accidentally promises the exact same car to an NGO client for a field trip on the same weekend. This causes chaotic last-minute scrambles, expensive rental sub-leases, and broken corporate contracts.

The Driver Coordination Black Hole

When a vehicle is booked, the agency has to manually call or WhatsApp multiple drivers to see who is free. Drivers get confused about pickup times, flights get delayed, and corporate clients end up stranded at the airport terminal because the driver didn't get the updated arrival time.

The Cash Flow & Booking Fraud Leak

Clients ask to "reserve" a car for a busy holiday weekend, but fail to show up. The agency loses millions of RWF in dead inventory. Alternatively, drivers collect cash payments from clients directly and under-report the amounts to the owner, causing massive revenue leaks.

THE PURE-SOFTWARE SOLUTION

A hyper-focused, lightweight Fleet Management, Live Scheduling, and Dispatch SaaS designed specifically for private car rental operators, tour agencies, and private airport transfer companies in Rwanda.

1. Live Fleet & Driver Calendar Dashboard

An ultra-clean, timeline-based web interface where the agency manager registers their fleet by vehicle category/plate number and lists their available drivers.

2. Instant B2B / Tourist Storefront Link

Generates a clean, mobile-optimized booking link that agencies place on their social media, share via WhatsApp Business, or email to international clients.

3. Collision-Guarded Booking Architecture

Clients input pickup date, return date, and vehicle class (e.g., RAV4, Land Cruiser, Coaster Bus). The backend instantly queries the database, verifies exact available physical inventory for those dates, and locks the selection down to the millisecond.

4. Automated Driver USSD/SMS Dispatch & Flight Tracking

Once an order is confirmed, the system text-dispatches the assigned driver via Africa's Talking with the itinerary in Kinyarwanda or English. It monitors the pickup window and keeps drivers accountable via a zero-data check-in hook.

THE BUSINESS MODEL

Because car rentals are high-ticket transactions (ranging from 40,000 RWF to over 200,000 RWF per day per vehicle), operators have high cash flows and will happily pay premium software fees to protect their assets.

Subscription Tier	Target Fleet Size	Monthly Fee (RWF)
Starter Tier	Small local operators managing up to 5 cars	**35,000 RWF / mo**
Growth Tier	Mid-sized rental agencies managing up to 20 cars	**75,000 RWF / mo**
Enterprise Tier	Large corporate tour operators & luxury VIP transport fleets	**150,000 RWF / mo**
